

HYPERREF COLORLINKS LATEX

How to Customize Hyperlinks in LaTeX**

Hyperref is a LaTeX package that enhances the document's functionality by adding clickable links, bookmarking, and other features. Here's how you can use it:

Installing Hyperref:

To use hyperref, add the following line to your preamble:

```
\usepackage{hyperref}
```

Adding Link Color:

To change the color of hyperlinks, use the `colorlinks` option followed by the desired color:

```
\hypersetup{colorlinks=true}  
\hypersetup{linkcolor=blue} % Change link color to blue
```

Making References Clickable:

By default, references in LaTeX are not clickable. To make them clickable, use the hyperref package:

```
\usepackage{hyperref}  
\hypersetup{hidelinks} % Hide link boxes  
\href{https://example.com}{Reference text}
```

Changing Reference Color:

To change the color of references, use the `linkcolor` option as follows:

```
\hypersetup{linkcolor=red} % Change reference color to red
```

Adding a DOI Hyperlink:

To create a hyperlink to a DOI, use the `doi` command:

```
\usepackage{doi}  
\doi{10.1080/00207540600844219}
```

Adding a Color Box:

To add a colored box in LaTeX, use the `colorbox` environment:

```
\documentclass{article}  
\usepackage{xcolor}  
  
\begin{document}  
\begin{colorbox}{blue}  
This is a blue box.  
\end{colorbox}
```

```
\end{document}
```

Changing Color in Bootstrap Templates:

To change the color in Bootstrap templates, use the `\textcolor` command followed by the desired color:

```
\documentclass{article}
\usepackage{color}

\begin{document}
\textcolor{red}{Example text}
\end{document}
```

Conclusion:

Hyperref and other LaTeX packages provide powerful tools to enhance the visual appeal and functionality of your documents. By utilizing the techniques described above, you can easily customize hyperlinks, add clickable references, create colored boxes, and much more.
