"Since fine dust particles in the ambient air emitted by cars, trucks and busses are identified as a health risk, emissions from combustion engines are limited by law. The increasing change from combustion to electric power train as well as the use of gasoline and diesel particulate filters lead to a focus shift to other fine dust sources like tire or brake wear. To further reduce the fine dust pollution caused by road transportation, it is planned to limit particle emissions of brake systems of passenger vehicles by law. The PMP informal working group of the UNECE is already working on a measuring cycle and a suitable test method for this purpose for several years. Hence, a draft of a test protocol was published in June 2021 and is validated in an inter-laboratory study (ILS) at different labs The proposal describes a method to test a single brake-vehicle-combination. The analysis of the market in this regard reveals an extremely large number of possible pairings. Combined with the proposed duration of a complete test-run, this leads to a very high demand of testing to determine the variety of brake emissions of existing vehicle fleets in different markets. Hence, it is crucial to understand whether there are physical correlations between different test combinations to estimate the emission levels of brake-vehicle-pairings. The aim of this study is to investigate the influence of different vehicle and brake parameters in regard of the measured particle number and mass emission. In addition, the results are analysed for physically relevant correlations. This is done using various test series in which only individual test parameters, such as the size of the brake disc or the vehicle weight, are varied. The study also tries to address the effect of different measures for noise, vibration and harshness (NVH) of the brake system

on the particle number and mass emission results. The results show that plausible predictions of the emission are possible for the variation of specific test parameters. On the other hand, there are test parameters that require additional information or even a separate emission test when they are changed. THE MANAGEMENT OF CONSTRUCTION A PROJECT LIFECYCLE APPROACH 1ST EDITION PAPERBACK BY BENNETT F LAWRENCE PUBLISHED BY BUTTERWORTH HEINEMANN

The Management of Construction: A Project Lifecycle Approach by Bennett F. Lawrence

Butterworth-Heinemann's "The Management of Construction: A Project Lifecycle Approach" is an essential guide for construction professionals seeking a comprehensive understanding of the industry. Written by Bennett F. Lawrence, this seminal work provides a holistic overview of project management from inception to completion.

Q1: What are the key principles of the project lifecycle approach?

A: The project lifecycle approach focuses on managing construction projects as a series of distinct phases, each with specific goals, deliverables, and responsibilities. It emphasizes planning, coordination, and communication throughout the project, ensuring that all stakeholders are aligned and working towards a common goal.

Q2: How can this approach improve construction project outcomes?

A: By breaking down complex projects into manageable phases, the project lifecycle approach enhances predictability, reduces risk, and facilitates effective decision-making. It enables project teams to identify potential challenges early on, allocate resources optimally, and adjust their strategies as needed to ensure

successful project completion.

Q3: What are the key benefits of this book for construction professionals?

A: "The Management of Construction" provides a comprehensive framework for managing construction projects effectively. It covers all aspects of project management, from project initiation and planning to execution and closeout. The book is packed with practical examples, case studies, and tools that can be applied directly to real-world projects.

Q4: Who should read this book?

A: This book is essential reading for construction managers, project engineers, architects, contractors, and anyone involved in the construction industry. It is also a valuable resource for students studying construction management or related fields.

Q5: What makes this book unique compared to other construction management books?

A: "The Management of Construction" stands out with its focus on the project lifecycle approach and its practical orientation. Lawrence's extensive experience in the industry brings a unique perspective to the book, providing readers with invaluable insights and best practices for successful project management.
