

HISTORICAL GEOLOGY UNIT 6 STUDY G

What is the history of the Phanerozoic eon? The Phanerozoic Eon is the most recent, 541 million years ago to today, and means “visible life” because the Phanerozoic rock record is marked by an abundance of fossils. Phanerozoic organisms had hard body parts like claws, scales, shells, and bones that were more easily preserved as fossils.

What are the 3 divisions of Phanerozoic eon? The Phanerozoic Eon is divided into three eras, the Paleozoic, Mesozoic and Cenozoic eras. These were named for the kinds of fossils that were present. The Cenozoic is the youngest era and the name means “new life”.

What are the 12 periods of the Phanerozoic eon?

What is the difference between the Phanerozoic eon and the Proterozoic eon? Phanerozoic Eon, the span of geologic time extending about 541 million years from the end of the Proterozoic Eon (which began about 2.5 billion years ago) to the present.

What were the conditions like in the Phanerozoic eon? At the start of the Phanerozoic Eon, the climate became warm and humid. Since then Earth's climate has gone through four cycles of frigid glaciers and warm tropical seas. Some organisms survive changes in the climate. Others go extinct when the climate changes too much.

What life do you find in the Proterozoic eon? Proterozoic rocks contain many definite traces of primitive life-forms—the fossil remains of bacteria and blue-green algae as well as the first oxygen-dependent animals, the Ediacara fauna.

What event characterized the beginning of Phanerozoic eon? The Phanerozoic is characterized by massive changes in life. The Cambrian explosion, 541 Ma, corresponded to the appearance of a great abundance of complex and diversified invertebrates and vertebrates. Most of the known animal phyla appeared during this period (Budd, 2003).

What are the mass extinctions of the Phanerozoic eon? The five most severe mass extinction that Paleobiologists recognized during Phanerozoic Eon are Late Ordovician, Late Devonian, Late Permian, End Triassic, and Cretaceous-Tertiary.

What are the three eras which are from oldest to youngest of the Phanerozoic? The Phanerozoic Eon is divided into three eras: Cenozoic, Mesozoic, and Paleozoic. The Cenozoic Era is the most recent and the Paleozoic Era is the oldest of the three.

What is the order of the Phanerozoic eon from oldest to youngest?

Are we in the Phanerozoic eon? The Phanerozoic Eon is the current eon in the geologic time scale. It began around 541 million years ago (mya), and encompasses Earth's history from then to the present day. It represents around 12% of Earth's total history.

What era are we currently in? Our current era is the Cenozoic, which is itself broken down into three periods. We live in the most recent period, the Quaternary, which is then broken down into two epochs: the current Holocene, and the previous Pleistocene, which ended 11,700 years ago.

What are the three divisions of the Phanerozoic eon? The Phanerozoic Eon is divided into three eras—the Paleozoic, the Mesozoic, and the Cenozoic (Figure (here)).

What animals lived in the Phanerozoic eon? The Phanerozoic is divided into three eras: the Paleozoic, Mesozoic, and Cenozoic, which are further subdivided into 12 periods. The Paleozoic features the rise of fish, amphibians and reptiles. The Mesozoic is ruled by the reptiles, and features the evolution of mammals, and more famously, dinosaurs, including birds.

What eon are we in now? we live in Holocene Epoch, of the Quaternary Period, in the Cenozoic Era (of the Phanerozoic Eon)

How many major impacts have occurred during the Phanerozoic eon? There are certain major events that have occurred periodically throughout the Phanerozoic: Mass extinction events- Mass extinction events are extinctions where large numbers of species die off. Over the course of the Phanerozoic, there have been five major extinction events and several smaller extinctions.

What describes all geologic time before the Phanerozoic eon? What description below describes all geologic time prior to the Phanerozoic eon? The earliest span of geologic time is referred to as the Precambrian, which is an informal unit of time that is so old that little detail is known about it. For this reason, the Precambrian is not divided into periods or epochs.

Which era has lasted the longest? The longest timeframe officially designated as an era is the Paleoproterozoic, which lasted 900 million years from 2,500-1,600 mya. The largest subunit of geologic time is the Precambrian Supereon that lasted almost 4.2 billion years from the formation of the planet to around 252 million years ago.

What is the difference between Phanerozoic and Proterozoic eon? In terms of geology, the phanerozoic and proterozoic epochs are distinguished by the fact that the former spans the Paleozoic, Mesozoic, and Cenozoic eras, and the latter is of, or relates to, the geologic epoch from 2,500 Ma to 541.01.

What major event occurred during the Proterozoic eon? Significant events from the Proterozoic eon are the Great Oxygen Event, Snowball Earth, formation of the supercontinent Rodinia, and the evolution of eukaryotic cells and of multicellular organisms.

What was the most abundant life form during the Proterozoic? The blossoming of eukaryotes such as acritarchs did not preclude the expansion of cyanobacteria – in fact, stromatolites reached their greatest abundance and diversity during the Proterozoic, peaking roughly 1.2 billion years ago.

What event marks the beginning of the Phanerozoic eon? The beginning of the Phanerozoic Eon was punctuated by Cambrian Explosion of life. The Paleozoic Era is divided into Periods that include: Cambrian, Ordovician, Silurian, Devonian, Carboniferous (Mississippian, Pennsylvanian), and Permian.

What are the facts about eon? In formal usage, eons are the longest portions of geologic time (eras are the second-longest). Three eons are recognized: the Phanerozoic Eon (dating from the present back to the beginning of the Cambrian Period), the Proterozoic Eon, and the Archean Eon. Less formally, eon often refers to a span of one billion years.

What is the first era in the Phanerozoic eon Greek for old life? Paleozoic Era, or Palaeozoic Era, Major interval of geologic time, c. 542–251 million years ago. From the Greek for “ancient life,” it is the first era of the Phanerozoic Eon and is followed by the Mesozoic Era.

What are the mass extinctions of the Phanerozoic eon? The five most severe mass extinction that Paleobiologists recognized during Phanerozoic Eon are Late Ordovician, Late Devonian, Late Permian, End Triassic, and Cretaceous-Tertiary.

Student Exploration pH Analysis Activity Answer Key on Gizmo

Paragraph 1: What is pH?

Question: What does pH measure?

Answer: pH measures the acidity or basicity of a solution.

Question: What is the pH range?

Answer: The pH range is from 0 to 14, with 0 being the most acidic and 14 being the most basic.

Paragraph 2: Indicators

Question: How do indicators work?

Answer: Indicators change color depending on the pH of a solution.

Question: What are some examples of indicators?

Answer: Some examples of indicators include litmus, phenolphthalein, and methyl orange.

Paragraph 3: Neutralization

Question: What is neutralization?

Answer: Neutralization is the reaction between an acid and a base, resulting in the formation of a salt and water.

Question: What happens to the pH of a solution after neutralization?

Answer: After neutralization, the pH of the solution will be 7, indicating a neutral solution.

Paragraph 4: Titration

Question: What is titration?

Answer: Titration is a technique used to determine the concentration of an unknown acid or base by adding a known concentration of the opposite reactant.

Question: What is the endpoint of a titration?

Answer: The endpoint of a titration is the point at which the reaction between the acid and base is complete, resulting in a color change of the indicator.

Paragraph 5: Gizmo Activity

Question: What does the "pH" tab in the Gizmo show?

Answer: The "pH" tab shows the pH of the solution in real-time as you add acid or base.

Question: How can you use the Gizmo to determine the concentration of an unknown acid?

Answer: You can use the Gizmo to determine the concentration of an unknown acid by titrating it with a known concentration of a base, then using the volume of base added to calculate the concentration of the

acid.

Tuck Everlasting: Questions and Answers

1. Why are the Tucks hiding in the woods?

- To avoid discovery and capture. The Tucks possess a magical spring that grants immortality, which they do not want to share with the outside world, fearing the consequences it would unleash.

2. How did Winnie Foster become aware of the spring?

- She accidentally stumbled upon it while exploring the woods. After tasting the water, she realized it had transformed her.

3. What does Winnie decide to do about her newfound knowledge?

- Winnie initially keeps the spring a secret but eventually confides in the Tucks. She struggles with the ethical implications of their immortality and the potential danger it poses to her own family.

4. How does the novel explore the themes of life, death, and the passage of time?

- The Tucks' immortality challenges the traditional understanding of mortality. Winnie and the reader are forced to confront the inevitability of death, the value of life, and the regret that can come with eternal youth.

5. What is the ultimate fate of the Tucks?

- In the end, the Tucks sacrifice their immortality to save Winnie's life. They accept the transience of life, recognizing that the true meaning lies in living every moment to the fullest.
